TITLE : COMMUNICATION NETWORK
SYSTEM AND COMMUNICATION
NETWORK TERMINAL EQUIPMENT

ABSTRACT : PROBLEM TO BE SOLVED: To control on reproduction, copying, etc., on a delivery business main body side while making it possible to record and store content data as to the communication network system.

SOLUTION: A CD-R3 loaded in a CD-R drive unit 5 of a personal computer 1 is provided with a device driver area ϵ_1 and a data storage area ϵ_2 and in the device driver storage area ϵ_1 , an ID code, an ID code query program, a decoding program, a copy inhibition code detection program, etc., are previously recorded as well as a communication program. When content data stored in a host computer 2 is accessed through the communication network 11, the communication program in the device driver storage area ϵ_1 is called to gain the access and the accessed content data is recorded in the data storage area ϵ_2 on the CD-R3.
